

**Title**

Effects of Dr. Buzby's Toe Grips® on lameness scores and client specific outcome measures after canine tibial plateau-leveling osteotomy to treat ruptured anterior cruciate ligament.

**Purpose**

Dogs who require surgery to repair a ruptured anterior cruciate ligament may develop lameness. A commercial device called Toe Grips placed on the nails is intended to reduce lameness, yet the benefit of this has not yet been demonstrated.

**Eligibility**

To be eligible for this study, dogs must meet several criteria:

- Be 2-8 years old and weigh 15-45kg
- Undergo TPLO surgery for ruptured anterior ligament in the knee
- Cannot have concurrent orthopaedic or serious medical diseases

**For more information** about this study or to enquire about eligibility, please contact Dr. Jennifer Repac at 212-329-8800 or email [rehab.team@amcnyc.org](mailto:rehab.team@amcnyc.org).
